# INTENTIONALLY LEFT BLANK

AIP MACAO AD1.1 - 1 15 JUL 2010

# AD 1. AERODROME/HELIPORT — INTRODUCTION

#### AD 1.1 AERODROME/HELIPORT AVAILABILITY

- 1. General conditions under which aerodrome/heliport and associated facilities are available for use
- 1.1 Subject to the observance of the applicable rules, conditions, and limitations set forth in this document, foreign civil aircraft registered in a foreign country which at the time is a member of the International Civil Aviation Organisation, may be navigated in Macao.
- 1.2 Aircraft registered under the laws of foreign countries, not members of the International Civil Aviation Organisation, which grant reciprocal treatment to Macao aircraft and airmen may be navigated in Macao subject to the observance of the same rules, conditions, and limitations applicable in the case of aircraft of ICAO member states.
- 1.3 However, excluding when existing bilateral agreements for regular scheduled flights, a prior authorisation has to be forwarded to and granted by the Civil Aviation Authority in conditions laid in GEN 1.2 1 to 1.2 8 of this AIP.
- 1.4 Access of persons to restricted and controlled areas
- 1.4.1 As a general principle, access to restricted areas is only permitted in respect of persons who carry out regular duties in such areas and while performing such duties.
- 1.4.2 Special cases concerning persons whose duties include actually performing activities in restricted areas to an extent as justifies being granted access to such areas, may be considered, but are not included in the item above.
- 1.4.3 The principles governing the access of members of Diplomatic Legations as set forth in the Vienna Convention are upheld, and shall be addressed in the appropriate Resolution.
- 1.4.4 Access to restricted and controlled areas shall be granted by means of permanent or temporary access card, according to circumstances.
- 1.4.5 In order to provide efficient and stringent control of access of persons to restricted areas and controlled areas, the following access cards shall be issued:
  - a) Permanent access card (2 years)
  - b) Temporary access card (up to 5 consecutive days and according to the period authorized)
- 1.4.6 Details of access of persons to restricted and reserved areas refers to FAL/SEC Resolution No. 1/2010.
- 1.5 Access and circulation of vehicles in restricted areas
- 1.5.1 The access and circulation of vehicles in restricted areas is authorised as follow: on a permanent basis in respect of vehicles employed regularly in such areas, or on a temporary or single basis in respect of vehicles occasionally employed in such areas.

- 1.5.2 The authorisation applies only to the vehicle itself. The occupants or load carried in the vehicles, as well as the driver are excluded from such authorisation and shall comply will access rules and other pertaining requirements.
- 1.5.3 The authorisation applies to restricted areas shall further be subject to Safe Circulation Rules (Safety), that shall include, among others, flame damper for exhaust pipes, driver's license, appropriate insurance, etc.
- 1.5.4 The control of access and the surveillance of the circulation of vehicles in restricted areas is done by means of system of identification for vehicles, comprising three modes:
  - a) Fixed identification
  - b) Removable plates
  - c) Badges
- 1.5.5 Details of access and circulation of vehicles in restricted areas refers to FAL/SEC Resolution No. 2/95.

# 2. Applicable ICAO documents

ICAO Standards and Recommended Practices contained in Annex 14 are applied in so far as geographical limitations permit. Differences to ANNEX 9 are mentioned in Section GEN 1.7.

## 3. Civil use of military air base

NIL.

#### 4. CAT II operations at aerodrome

RWY 34, subject to serviceability of the required facilities, is suitable for CAT II operations by operators whose minima have been accepted by the Civil Aviation Authority. LOW

VISIBILITY OPERATIONS PROCEDURES (LVP) will be in force whenever:

- i) Runway Visual Range (RVR) TDZ RWY 34 is 800 m or below; or,
- ii) Cloud base height (CBH) RWY 34 is 200 ft or below; or,
- iii) Visibility conditions decrease rapidly;

Special procedures and safeguards will be applied during CAT II operations to protect aircraft operating in low visibility and to avoid interference to the ILS signals in accordance with ICAO Doc 9365 – Manual of All-Weather Operations.

Pilots will be informed when this procedure is in use by RTF and ATIS through the message "LOW VISIBILITY OPERATIONS IN FORCE".

CAT II operations at MIA by operators of aeroplanes not registered in Macao will be considered under proposal to Civil Aviation Authority indicating the aeroplane type, certification by the State of Registry to operate CAT II and minimum authorised by the State and the operators. Application form for authorization to conduct low visibility operations can be downloaded from AACM website.

AIP MACAO AD1.1 - 3 26 APR 2018

# 5. Friction Measuring device used and friction level below which the runway is declared slippery when it is wet

- 5.1 Runway surface friction at Macao is measured by means of a Mu-meter. Runs are carried out at a speed of 65 km/hour regularly on a dry runway surface using a self-watering device giving a controlled depth of 1 mm of water to monitor the effectiveness of the rubber deposit removal action and surface wear and tear. Should the friction value fall to 0.42 or less the runway will be notified as liable to be slippery when wet and the Macau International Airport Co. Ltd. (CAM), Airport Operations Department should initiate the corrective actions.
- 5.2 If and when such notification is given, there may be a significant deterioration both in aircraft stopping performance and directional control when the runway is wet. Takeoff or landing should then be considered only if the distances available equal to or exceed those required for slippery conditions as determined in the Aeroplane Flight Manual.
- 5.3 If a pilot experiences a significant degradation of the braking action, it should immediately be reported to ATC for relay to subsequent landing aircraft and for follow-up action by CAM, Airport Operations Department.
- 6. Other Information

NIL.

# INTENTIONALLY LEFT BLANK

AIP MACAU AD 1.2 - 1 13 Jul 2023

# AD 1.2 RESCUE AND FIRE FIGHTING SERVICES AND SNOW PLAN

# 1. Rescue and fire fighting services

Adequate rescue and fire fighting vehicles are provided at Macau International Airport. The degree of protection has been determined in accordance with attachment A to Annex 14. In addition, 5 rescue and fire-fighting vessels with foam and water fire-fighting capability will be available 24 hours a day. AD 2.6 refers.

## 2. Snow Plan

#### VMMC AD 2.20 LOCAL TRAFFIC REGULATIONS

- Aircraft flying to and from the airport are not allowed to overfly urban, populated areas on the North and West shore of Macau International Airport, comprising Macau Peninsula, and Taipa and Coloane Islands
- 2 Turbulence may be encountered.
- Pilots are warned that VFR holding by fixed-wing and rotary-wing light aircraft, one at a time, may take place from time to time during daylight and night hours east of the runway.
- 4 Overflight of urban area.
  - All aircraft are forbidden to fly over the urban area in Macao Special Administrative Region.
- 5 Transit and departure conditions for engine out ferry flights
- 5.1 General conditions
- 5.1.1 Transit engine-out ferry operations through Macao will not be permitted.
- 5.1.2 Departure engine-out ferry operations will only be permitted if so approved in the airplane Flight Manual.
- 5.1.3 No form of revenue load is to be carried.
- 5.1.4 Aerodrome operating minima are to be not less than 1000 ft cloud ceiling and 5 km (2.7 NM) visibility.
- 5.1.5 In the ATC flight plan, an engine-out ferry flight is to be notified and confirmation that the conditions for engine-out ferry flight will completed with must be included in item 18 by the insertion of a statement:

## 5.2 Conditions for departing flights

- 5.2.1 Engine-out ferry flights departing from Macao must obtain prior permission from the Civil Aviation Authority.
- 5.2.2 Engine-out ferry take-off must be operated on Runway 16.
- 5.2.3 The aircraft must be operated at a weight which, in the event of future engine failure at or after V1, will enable a positive net flight path to be maintained and standard ICAO obstacle clearance requirements to be met.

## 6. Ground manoeuvring of aircraft at Macau International Airport

- 6.1 Legislation
- 6.1.1 The rules concerning ground manoeuvring of aircraft and vehicles are indirectly specified in Eleventh Schedule to the Air Navigation Regulation of Macao.

## **6.2** Definition of taxiing aircraft

- 6.2.1 Aircraft taxiing are those aircraft manoeuvring under the following conditions:
  - (1) Aircraft moving under their own power within the airport boundaries or any part of the airport subject to communal use, excluding take-off and landing.
  - (2) Aircraft being moved with the assistance of auxiliary power i.e. tractor, jeep or by any other mechanical means.
  - (3) Aircraft being manoeuvred by hand.

Note: Aircraft classified under 1), 2) and 3) above are not subject to these regulations unless they are moved along or across runway or taxiways, in which case they are considered to be taxiing.

## 6.3 Local taxiing / air-taxiing regulations

- 6.3.1 Overtaking of moving aircraft at Macau International Airport when taxiing is prohibited.
- 6.3.2 When taxiing/air-taxiing on the Terminal apron aircraft shall follow the nose-wheel guide lines at all times. Marshalling service will normally be available to assist pilots in the correct positioning of their aircraft whilst parking.

Note: Pilots should exercise extreme caution when manoeuvring on the aprons due to the proximity of other aircraft, ground staff and equipment. Engine power should be restricted to the minimum required to reduce the adverse effect of jet blast. A case in point is the use of greater than normal breakaway thrust when making the turn from the parking bay to the taxiway centreline. Pilots should restrict the power setting to the absolute minimum necessary to execute the turn.

# 6.4 Aircraft equipped with radio

- 6.4.1 Before the commencement of any manoeuvre, all aircraft equipped with radio, except those specified in the "Note" to paragraph 6.2 above are to call "Ground" on 121.725 MHz or Macau Tower on 118.0 MHz when Ground control is not in operation.
- 6.4.2 A person qualified, as in paragraph 6.6 below, shall be in charge of all movements. If voice communication cannot be established, the aircraft is to remain in position and comply with regulations applicable to aircraft not fitted with radio.

#### 6.5 Aircraft unable to establish radio contact

6.5.1 When aircraft that are unable to establish radio contact are to be moved, details of all such manoeuvres are to be passed by telephone or personal contact the Airport Operation Centre.

## 6.6 Persons qualified to taxi / air-taxi aircraft

- 6.6.1 No person may taxi/air-taxi an aircraft on Macau International Airport unless he is qualified under one of the following categories:
- 6.6.1.1 A licensed pilot in possession of a valid license to operate that type of aircraft;
- 6.6.1.2 A Student Pilot under instruction who has been authorised by a Flying Instructor in possession of a valid instructor's license for that type of aircraft.

## **6.7** Towing aircraft

All towing manoeuvring not intended for departure shall be previously coordinated with airport operations service.

# **7** Regulations for local flights in the Macau Aerodrome Traffic Zone (ATZ)

# 7.1 ATC Unit

Flights within the ATZ are under the control of Aerodrome Control, call sign "Macau Tower", operating on 118.0 MHz for air movements and "Macau Ground" operating on 121.725 MHz for ground movements.

- 7.2 General rules
- 7.2.1 ATC clearance for local flying will only be given if, in the assessment of the Aerodrome Control, such flying will not interrupt or unnecessarily delay the normal operation of public transport aircraft.
- 7.2.2 Solo flights by non-licensed pilots are prohibited.
- 7.2.3 Before entering the ATZ, pilots shall request ATC clearance.
- 7.2.4 Before leaving the ATZ, pilots shall inform ATC of their exit point and destination before changing to the next ATC unit.
- 7.2.5 VFR flights during daylight hours may be cleared by ATC provided the weather observation at Macau International Airport shows a visibility of at least 5 km and a cloud ceiling of not less than 1500 ft.

# 7.3 Fixed-wing aircraft operations

7.3.1 Take-off and Landing restrictions

See charts

7.3.2 Traffic Circuit

See charts

- 7.3.3 Weather Minima
- 7.3.3.1 Circuit operations are not permitted when the visibility is less than 5 km or the lowest cloud is lower than 1500 ft in the circuit area.
- 7.3.3.2 Low visibility operation minimum: see AD chart.
- 7.3.4 Night flying
- 7.3.4.1 Special VFR flights at night may be cleared by Macau Tower providing that:
  - (1) Traffic density is such that flights will not delay public transport aircraft.
  - (2) Weather observations show a visibility of at least 9 km and a cloud ceiling of not less than 1800 ft.

- (3) The scale of equipment carried by the aircraft is adequate for flying at night.
- (4) The flight is contained in Macau ATZ, or
- (5) The flight has been initiated and authorised by adjacent ATS Unit, or has been accepted by an adjacent ATZ unit.

## 8 Push - back and start - up procedures

- 8.1 All aircraft other than helicopters are to call one of the following services five minutes prior to start-up to put their clearance on request:
- 8.1.1 Macau Ground 121.725 MHz permanent
- 8.1.2 Macau Tower 118.000 MHz permanent
- 8.2 Pilots are to inform Macau Ground/Tower as appropriate their callsign, parking bay number/location and proposed flight level if it is different from the filed flight plan when they make the call as per para. 8.1 above.
- 8.3 Aircraft should not commence start-up, push back or any other manoeuvre on the apron unless they have obtained clearance from Macau Ground/Tower as appropriate.
- 8.4 Aircraft start-up engines will be allowed by Macau Control Tower, after the engines clear the white taxi line protection.
- 8.5 Whilst push back procedure is being conducted it is essential for safety reasons that communications contact is maintained between pilot and ground engineer in charge.
- 8.6 Once a request for clearance has been made as per para. 8.1 above, delays in getting ready to start, taxi or take-off may result in withdrawal of ATC clearance.

## 8.7 Color-Coded Aircraft Pushback Procedures

|                        | RWY 34/16                            | Departure                          |
|------------------------|--------------------------------------|------------------------------------|
| STAND NUMBER           | Normal pushback                      | Pushback after                     |
|                        | & start-up                           | engine started-up                  |
| A1-A15, A17, B1-B6, B8 | BLUE                                 | BLUE                               |
| B7, B10, B10L, B10R    | GREEN                                | GREEN / PINK                       |
| G01-G04                | FOLLOW BREAKAWAY<br>POINT "X"        | N/A                                |
| G05, G06               | FOLLOW BREAKAWAY<br>POINT "Z"        | FOLLOW BREAKAWAY<br>POINT "Z"      |
| G07, G08               | FOLLOW BREAKAWAY<br>POINT "Y" OR "Z" | FOLLOW BREAKAWAY POINT "Y" OR PINK |
| G13-G15                | FOLLOW BREAKAWAY<br>POINT "Z"        | N/A                                |

|            | Color-coded Push back Procedures  |  |  |  |  |  |
|------------|---|--|--|--|--|--|
| Color Code | Detailed Description  |  |  |  |  |  |
| BLUE       | Aircraft pushback facing South or North depending on the Runway-in-use. If necessary, special instruction will be issued by Control Tower. Startup can be commenced after the engines cross the white taxi line protection.   |  |  |  |  |  |
| GREEN      | Pushback of aircraft with wingspan less than 36m on B7, B10L, B10R shall be done by pushing the aircraft tail towards GAP and then towed forward until Breakaway Point 1 in normal situation or in situation that aircraft with APU problem and requires starting up engine on stand while No aircraft is parked on G05 & G06.  Pushback of aircraft with wingspan equal to or greater than 36m on B7, B10 shall be done by pushing the aircraft tail towards GAP and then towed forward until Breakaway Point 2 in normal situation or in situation that aircraft with APU problem and requires starting up engine on stand while No aircraft is parked on G05 & G06.  Except that the startup on stand due to APU problem, other startup can only be commenced when the pushback finishes at Breakaway Point. |  |  |  |  |  |
| PINK       | The PINK procedure requires pushing the aircraft tail towards North until either the beginning of Taxiway C1 for RWY16 departure or Taxiway A for RWY34 departure. Except that the startup on stand due to APU problem, other startup can only be commenced when the pushback finishes.  The procedure applies for:  - Pushback of aircraft with APU problem, which requires to start up engine on stand B7 or B10, B10L or B10R while aircraft is parked on G05 or G06.  - Pushback of aircraft with APU problem, which requires to start up engine on stand G07 or G08 while aircraft is parked on G03 or G04.  |  |  |  |  |  |

## Remarks:

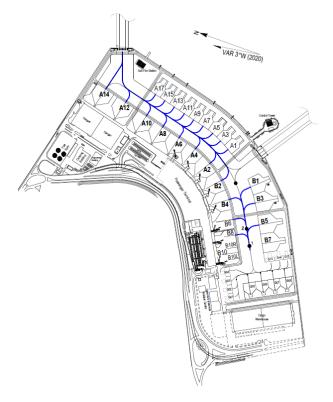

- 1. For aircraft parked on Stands B1 and B3, no simultaneous pushback is allowed.
- 2. For aircraft start up on the Stand, coordination shall be done in advance among ATC, Pilot and AOCC (for follow-me to inspect the surrounding area of the aircraft involved) in order to guarantee ground safety.
- 3. The Breakaway Point 1 mentioned above is the one at B7 and Breakaway Point 2 is one between B5 and B7.
- 4. For **BLUE** procedure, the color code may be omitted in the air-ground communication between ATC and pilot.

| G01 – G15 Push Back /Tow Procedures |                                     |   |
|-------------------------------------|-------------------------------------|---|
| Aircraft Stand                      | Nose wheel on<br>Breakaway<br>Point | Detailed Description  |
| G01, G02, G03, G04                  | X                                   | Aircraft shall be <u>pushed back</u> following the BLUE lead out line until the aircraft tail towards Cargo Roadway, and then pull ahead up to Breakaway Point "X". |
| G05, G06                            | Z                                   | Aircraft shall be <u>pushed back</u> from the stand until the Breakaway Point "Z".  |
| G07                                 | Y                                   | When there is no aircraft paring on G03 & G04, aircraft shall be <u>pushed from</u> G07 and until the Breakaway Point "Y".  |
|                                     | Z                                   | Aircraft shall be <u>pushed back</u> and towed to Breakaway Point "Z".  |
| G08                                 | Y                                   | When there is no aircraft paring on G03 & G04, aircraft shall be <u>pushed from</u> G08 and until the Breakaway Point "Y".  |
|                                     | Z                                   | Aircraft shall be <u>pushed back</u> to the end of Taxilane at inclined angle then towed to Breakaway Point "Z".  |
| G13, G14, G15                       | Z                                   | Aircraft shall be <u>pushed back</u> and towed to Breakaway Point "Z".  |

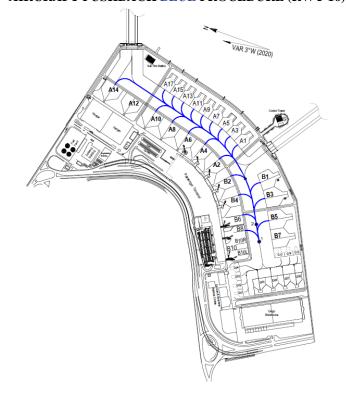

#### Remarks:

- 1. All aircraft/helicopter arrivals will be guided by Follow-me to the designated aircraft stands.
- 2. The Breakaway Points "X", "Y" and "Z" are located on the Taxilane centre line behind G03, behind G05 and behind G06/G07 respectively.
- 3. Helicopter operations are exempted from following defined Breakaway Points but are required to be pushed /towed to the Taxilane abeam its parking stand for startup and taxi out.
- 4. Two wing walkers are mandatory to be present for all pushback/tow manoeuvres.
- 5. NO simultaneous pushback / tow operations on Breakaway Points "X" and "Y" or "Y" and "Z" is allowed.
- 6. Aircraft on G13 can be Direct-taxi-out when B07 & adjacent Equipment Parking Areas are clear.
- 7. Aircraft on G05/G06 with APU problem, aircraft shall be pushed from G05/G06 until the Breakaway Point "Z".
- 8. Aircraft on G07/G08 with APU problem and no aircraft parking on G03 & G04, aircraft shall be pushed from G07/G08 and until the Breakaway Point "Y".
- 9. Aircraft on G07/G08 with APU problem and G03 or G04 are occupied by aircrafts, aircraft shall be pushed from G07/G08 and follow PINK procedure.
- 10. For G01/G02/G03/G04/G13/G14/G15 with APU problem, startup/pushback subject to coordination.

#### 9 Advanced-Visual Docking Guidance System (AVDGS)

9.1 The Advanced-Visual Docking Guidance System (AVDGS) provides both pilots with guidance for manoeuvring the aircraft into the gate to the correct centerline and stop-position Aircraft parking visual docking guidance system.

AVDGS is installed on stands A06, A04, A02, B02, B04, B06, B08 and B10/10L/10R.

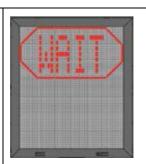

The Airport Authority will provide marshalling service for other aircraft not included on AVDGS.

In all other stands, the aircraft parking manoeuvre will be signaling by a marshaller.

#### 9.2 AVDGS Procedure

#### 1 START-OF-DOCKING

The system is started by pressing one of the aircraft type buttons on the Operator Panel. When the button has been pressed, WAIT will be displayed.

#### 2 CAPTURE

The floating arrows indicate that the system is activated and in capture mode, searching for an approaching aircraft.

It shall be checked that the correct aircraft type is displayed. The lead-in line shall be followed.

THE PILOT MUST NOT PROCEED BEYOND THE BRIDGE, UNLESS THE ARROWS HAVE BEEN SUPERSEDED BY THE CLOSING RATE BAR.

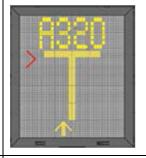

#### 3 TRACKING

When the aircraft has been caught by the laser, the floating arrow is replaced by the yellow center line indicator.

A flashing red arrow indicates the direction to turn.

The vertical yellow arrow shows position in relation to the center line. This indicator gives correct position and azimuth guidance.

#### 4 CLOSING RATE

The closing rate is the final countdown from a specific distance to the stop position. A yellow vertical closing rate bar/center line indicator appears with or without a digital countdown, depending on the configuration.

The closing rate bar represents the distance from stop, it consists of a number of rows representing 0.5m per row. Each row turns

off as the aircraft approaches stop (reducing the length of the bar, bottom upwards) and as the last row turns off, less than the interval for one row remains until STOP appears.

Meters (m)

A digital countdown shows the distance to stop numerically, starting from 30 m.

The digital countdown also uses different decrements during the closing rate process.

• Metric digital count starting with 1 meter decrements from 30 m down to 2 m followed by 0.2 meter decrements from 2.0 down to 0.2 m and then followed by STOP.

The pictures illustrate aircraft in the closing rate distance from stop position, slightly left of the center line. The red arrow indicates the direction to steer.

#### ALIGNED TO CENTRE

The aircraft is at the displayed distance from the stop position. The absence of any direction arrow indicates an aircraft on the center line.

Meters (m)

#### 6 SLOW (DECREASE SPEED)

AVDGS is configured with a slowdown active zone (distances set from the stop position, between 6 to 24 meters) according to an acceptable docking speed (max allowed speed, 2 m/s).

Note: When 2 m/s is rounded down to a single digit, it is approximately 7 km/h, 4 mph or 3 knots.

If the aircraft is approaching faster than the accepted speed, the system will show 'SLOW' or 'SLOW DOWN' as a warning to the pilots.

Meters (m)

#### **AZIMUTH GUIDANCE**

The aircraft is at the displayed distance from the stop-position. The yellow arrow indicates an aircraft to the right of the center line, and the red flashing arrow indicates the direction to turn.

Meters (m)

| 8  | STOP POSITION REACHED  When the correct stop-position is reached, the display will show STOP with a red border or with red lights.   | (STOP)      |
|----|--|-------------|
| 9  | DOCKING COMPLETED  When the aircraft has parked, OK will be displayed.   | OK.         |
| 10 | CHOCK ON  CHOCK ON will be displayed, when the ground staff has put the chocks in front of the nose wheel and press the "Chocks On" button on the Operator Panel   | CHOCK       |
| 11 | STOP SHORT  If the aircraft is found standing still but has not reached the intended stop position, the message STOP OK will be shown after a pre-configured time.   | STOP)<br>OK |
| 12 | WAIT  If some object is blocking the view toward the approaching aircraft or the detected aircraft is lost during docking close to STOP, the display will show WAIT.  The docking will continue as soon as the blocking object has disappeared or the system detects the aircraft again.  THE PILOT MUST NOT PROCEED BEYOND THE BRIDGE, UNLESS THE "WAIT" MESSAGE HAS BEEN SUPERSEDED BY THE CLOSING RATE BAR. | WAIT        |

#### SLOW (IN ABNORMAL SITUATIONS)

This display can be shown for two reasons:

#### A) BAD WEATHER CONDITION

During heavy fog, rain or snow, the visibility for the docking system can be reduced. When the system is activated and in capture mode, the display will disable the floating arrows and display SLOW and the Aircraft Type.

As soon as the system detects the approaching aircraft, the vertical closing rate bar will appear. If the system has been configured in this mode to make a shortened ID verification (check of engine position excluded), the Aircraft symbol will blink to give attention.

If the aircraft is lost during docking far out from the bridge or PBB area, the display will show SLOW. As soon as the system detects the approaching aircraft, the vertical closing rate bar will re –appear.

THE PILOT MUST NOT PROCEED BEYOND THE BRIDGE. UNLESS THE CLOSING RATE BAR IS SHOWN.

During entry into the Stand, the aircraft geometry is being checked.

If, for any reason, aircraft verification is not made 12 meters before the stop-position, the display will first show WAIT and make a second verification check. If this fails STOP and ID FAIL will be displayed.

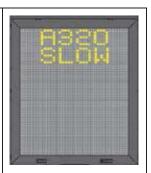

THE PILOT MUST NOT PROCEED BEYOND THE BRIDGE

# WITHOUT MANUAL GUIDANCE, UNLESS THE WAIT MESSAGE HAS BEEN SUPERSEDED BY THE CLOSING RATE BAR.

#### 15 TOO FAST

If the aircraft approaches with a speed higher than the docking system can handle, the message STOP TOO FAST will be displayed. The docking system must be re-started or the docking procedure completed by manual guidance.

#### 10 PBN procedures

- 10.1 For RNAV(GNSS) SID and STAR aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory. Aircraft that do not have approval or whose RNP1/P-RNAV capability has been degraded before departure shall use the Conventional Procedure.
- 10.2 To harmonize the implementation of PBN procedures, pilots of arriving aircraft to Macau International Airport are requested to report the type of approach on their initial contact with Macao ATC.

#### 11 RNP AR approach

11.1 Special Authorization from AACM is required to conduct RNP AR APCH in Macao.

#### VMMC AD 2.21 NOISE ABATEMENT PROCEDURES

The following procedures govern operations at Macau International Airport:

#### 1 Noise abatement operating restrictions

#### 1.1 Departing aircraft

1.1.1 Take-off on runway 34 at any time

Climb offset 15° (right) to 400 ft (120 m), then turn RIGHT. Aircraft are NOT TO OVERSHOOT Jiuzhou DVOR (ZAO) R231° which defines the northern limit for flights taking off runway 34 due to NOISE ABATEMENT for Zhuhai City.

- 1.2 Arriving aircraft
- 1.2.1 Landing on runway 16 at any time

Maintain inbound track 215° (true north) on the localizer course. Aircraft are NOT TO DEVIATE FROM Jiuzhou DVOR (ZAO) R231° which defines the northern limit for flights landing runway 16 due to NOISE ABATEMENT for Zhuhai City.

- 1.3 Aircraft with ICAO Annex 16 Chapter 2 condition will only be considered in a case-by-case basis. For Chapter 2 noise aircraft, operation time between 00:00 08:00 local time is not allowed.
- 2 Aeroplane noise abatement operating procedures for take-off NIL.

#### 3 Training flight

3.1 Requests to carry out training flights, irrespective of the direction of landing and take-off, must be submitted in writing to the Chairman of Civil Aviation at least 24 hours in advance of any proposed training.

# 4 Engine tests and ground runs

Engine run-up are subject to the following conditions:

4.1 Normally engine runs above ground idle power are not permitted during the critical hours of 2200 to 0700 local time. Exception may be considered case by case, depending on actual operational analyses (e.g. time needed for engine run-up, expected movements, etc).

- 4.2 Engine Ground Run Procedures
- 4.2.1 An engine ground run is defined as any engine start up not associated with the planned aircraft departure. Maintenance or test running of jet engine not mounted on an aircraft is prohibited unless performed in a test cell of adequate design.
- 4.2.2 Normally, engine ground running at idle power for duration not exceeding 15 minutes may be conducted on aircraft parking bays with previous coordination with Airport Operation Coordination Centre (AOCC). Extension of such limitation is subject to AOCC approval depending on airport conditions. Power runs above idle for maintenance purpose must be conducted at designated areas.
- 4.2.3 Initial requests for a ground run at any time should be made by telephone to Airport Operation Coordination Centre. The airline or their representatives are responsible for ensuring that all safety precautions against injury to persons or damage to properties, aircraft, vehicles, marine vessels (when the jet blast is directed towards the sea) and equipment in the vicinity are adopted. When ready to conduct the engine run, clearance from Macau Ground on 121.725 MHz. A listening watch must be maintained on the frequency throughout the engine run. The aircraft anti-collision beacons must be activated for the entire duration and that Macau Ground should be advised on its completion.

#### VMMC AD 2.23 ADDITIONAL INFORMATION

#### 1 Automatic Terminal Information Service (ATIS)

| STATI                              | BROADCAST ON | HOURS    | CONTENTS  | REMARKS   |
|------------------------------------|--------------|----------|---|---|
| ON                                 | FREQUENCY    |          |   |   |
| MACAU<br>Internation<br>al Airport | 126.4 MHz    | 24 hours | Continuous broadcast in voice by Aerodrome control:  Runway in use, Surface wind, Visibility, Runway visual range when it is less than 1500m Present weather Cloud Trend forecast Aerodrome QNH, Air temperature and Dew Point,  Any essential information considered to be useful to operation of aircraft e.g. low visibility operation in force, thunderstorms warnings, typhoon signal no. 8 or above, aerodrome surface conditions, unserviceability of navigation aids, type(s) of approach to be expected etc. | Pilots are required to acknowledge the identifier at first contact on the frequency of responsible approach control unit (Zhuhai APP 119.025 MHz and 125.525 MHz, Hong Kong radar 126.3 MHz and 119.1 MHz) if aircraft is arriving and on 118.0 / 121.725 MHz as appropriate (see AD 2.20) if aircraft is departing |

#### 2 GNSS RAIM Prediction Services and Associated NOTAM Information

GNSS RAIM availability prediction service and the associated NOTAM information related to GNSS availability will not be provided by AACM or Macau International Airport.

In accordance with ICAO Doc 9613, PBN Manual, aircraft operators shall subscribe the necessary information provided by other service providers to verify the RAIM availability for the intended route of flight.

# GUANG ZHOU FIR – HONG KONG FIR SID MACAO RWY 34 (BIGRO 1 E, MIPAG 2 E, NLG 1 E, IDUMA 1 E) CAT A, B, C, D

AD2-VMMC-60 07 AUG 2025

#### **BIGRO 1** E (minimum climb gradient of 4.8% required until leaving 1800 m)

Depart on track 359°M and climb to at or above 400 ft (120 m). Then turn right and continue climb to ZAO. Leave ZAO on R041°. Turn left at LATOP to intercept SMT R275° at or above 1200 m. Then continue climbing, at NLG R215° turn left to intercept NLG R220° at or above 1800 m. To KIBAS at 2700 m, turn right at KIBAS on ZUH 250°M, to BOKAT at 3600 m, to BIGRO.

If ZAO is unserviceable, depart on track 359°M, at MCU DME 3.3NM turn right on track 041°M and continue climbing. Turn left at MCU DME 9.0NM to intercept SMT 275°M at or above 1200m. Then join original procedure.

#### MIPAG 2 E (minimum climb gradient of 4.8% required until leaving 4500m)

Depart on track 359°M and climb to at or above 400 ft (120 m). Then turn right and continue climb to ZAO. Leave ZAO on R041°. At LATOP turn right to proceed on ZAO R042° and continue climbing to 4500 m and maintain. At ZAO DME 36.3NM (GUBLO) turn left to establish on CEN R131° to MIPAG at 4500m.

#### NLG 1 E (minimum climb gradient of 4.8% required until reaching 1500 m)

Depart on track 359°M and climb to at or above 400 ft (120 m). Then turn right and continue climb to ZAO. Leave ZAO on R041°. At LATOP turn left to establish on NLG R167° and reach 1500m by NLG.

If ZAO is unserviceable, depart on track 359°M, at MCU DME 3.3NM turn right on track 041°M and continue climbing. At MCU DME 9.0NM turn left to establish on NLG R167°M. Then join original procedure.

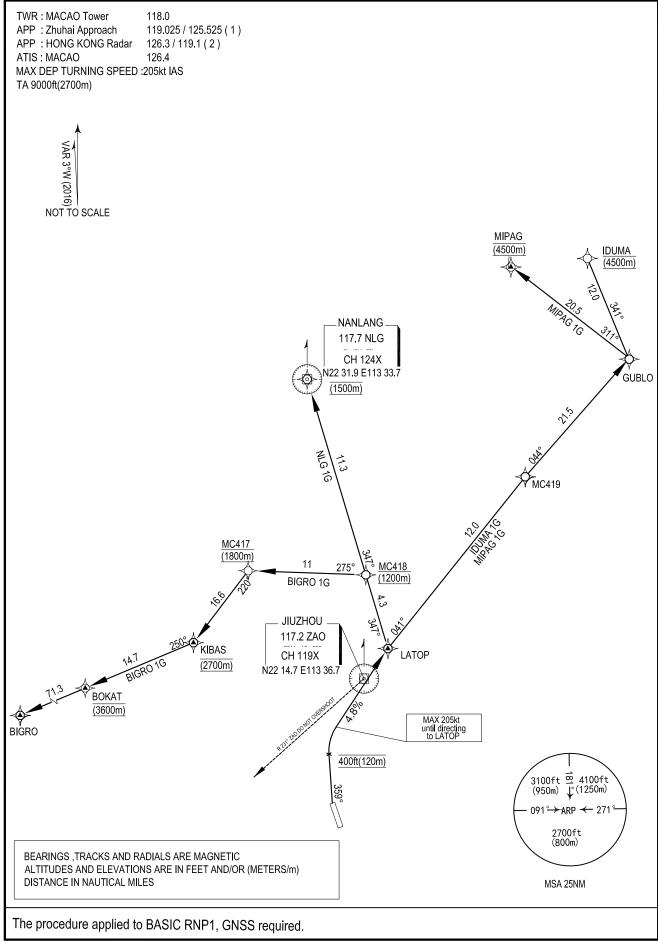

#### **IDUMA 1 E** (minimum climb gradient of 4.8% required until leaving 4500m)

Depart on track 359°M and climb to 400 ft (120 m). Then turn right and continue climb to ZAO. Leave ZAO on R041°. At LATOP turn right to proceed on ZAO R042° and continue climbing to 4500 m and maintain. At ZAO DME 36.3NM (GUBLO) turn left on track 341°M to IDUMA at 4500m.

#### **REMARK:**

- (1) Aircraft are NOT TO OVERSHOOT JIUZHOU DVOR (ZAO 117.2 MHz) R231° which defines the northern limit for flights taking off RWY 34 due to NOISE ABATEMENT for Zhuhai City.
- (2) Aircraft unable to comply with the minimum climb gradient must inform Macao ground control at first contact to allow special coordination.
- (3) Maximum departure turning speed: 205 kt IAS.
- (4) Owing to the proximity of the Hong Kong international airport, any deviation from the standard SID track could result in direct conflict with Hong Kong traffic. Pilots departing on RWY 34 are reminded the need to follow the standard SID track until LATOP unless deviation is approved by ATC in advance.

# GUANG ZHOU FIR – HONG KONG FIR RNAV<sub>(GNSS)</sub> SID MACAO RWY 34 (BIGRO 1 G, MIPAG 1 G, NLG 1 G, IDUMA 1 G)

AD2-VMMC-60 D 07 AUG 2025

CAT A, B, C, D

#### BIGRO 1 G (minimum climb gradient of 4.8% required until leaving 1800 m)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, to MC418 at 1200m, turn left to MC417 at 1800 m, to KIBAS at 2700 m, to BOKAT at 3600 m and BIGRO.

#### MIPAG 1 G (minimum climb gradient of 4.8% required until leaving 4500m)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, MC419, GUBLO, Turn left to MIPAG at 4500 m

#### NLG 1 G (minimum climb gradient of 4.8% required until reaching 1500 m)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, to MC418 at 1200m and to NLG at 1500m.

#### IDUMA 1 G (minimum climb gradient of 4.8% required until leaving 4500m)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, MC419, GUBLO. Turn left to IDUMA at 4500m.

#### **REMARK:**

- (1) For RNAV<sub>(GNSS)</sub> SID aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/ P-RNAV capability has been degraded before departure shall use the Conventional Departure Procedure: BIGRO 1 E, MIPAG 2 E, NLG 1 E, IDUMA 1 E.
- (3) Aircraft are NOT TO OVERSHOOT JIUZHOU DVOR (ZAO 117.2 MHz) R231° which defines the northern limit for flights taking off RWY 34 due to NOISE ABATEMENT for Zhuhai City.
- (4) Aircraft unable to comply with the minimum climb gradient must inform Macao ground control at first contact to allow special coordination.
- (5) Maximum departure turning speed: 205 kt IAS.
- (6) Owing to the proximity of the Hong Kong international airport, any deviation from the standard SID track could result in direct conflict with Hong Kong traffic. Pilots departing on RWY 34 are reminded the need to follow the standard SID track until LATOP unless deviation is approved by ATC in advance.

# GUANG ZHOU FIR - HONG KONG FIR RNAV(GNSS) SID MACAO RWY 34 (ALLEY 4 T, CONGA 4 T, GRUPA 4 T, NUDPI 1T) CAT A, B, C, D

AIP MACAO

# GUANG ZHOU FIR – HONG KONG FIR RNAV<sub>(GNSS)</sub> SID MACAO RWY 34 (ALLEY 4T, CONGA 4T, GRUPA 4T, NUDPI 1T)

AD2-VMMC-62 28 NOV 2024

CAT A, B, C, D

#### ALLEY 4 T (minimum climb gradient of 5.4% required until leaving 5500 ft)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, turn right to MC420 at or above 4000 ft (1219m), to MC411 at or above 5500 ft (1676m), to LUKBU at or above 6000 ft. Further climb when instructed by ATC. To MC311 at above 9000 ft, to MC313 between FL140 and FL160, to SOSLU, PECAN and ALLEY. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### **CONGA 4 T** (minimum climb gradient of 5.4% required until leaving 5500 ft)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, turn right to MC420 at or above 4000 ft (1219m), to MC411 at or above 5500 ft (1676m), to LUKBU at or above 6000 ft. Further climb when instructed by ATC. To MC311 at or above 9000 ft, to MC312 between FL130 and FL160, to VEDVO at or above FL140, to SEGPO at or above FL170, to DAKIG, DALOL, DUMEP, MEBKI and CONGA. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### **GRUPA 4 T** (minimum climb gradient of 5.4% required until leaving 5500 ft)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, turn right to MC420 at or above 4000 ft (1219m), to MC411 at or above 5500 ft (1676m), to LUKBU at or above 6000 ft. Further climb when instructed by ATC. To MC311 at or above 9000 ft, to MC312 between FL130 and FL160, to VEDVO at or above FL140, to SEGPO at or above FL170, to DAKIG, DALOL, XEMEK, SKATE and GRUPA. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### **NUDPI 1 T** (minimum climb gradient of 5.4% required until leaving 5500 ft)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, turn right to MC420 at or above 4000 ft (1219m), to MC411 at or above 5500 ft (1676m), to LUKBU at or above 6000 ft. Further climb when instructed by ATC. To MC311 at or above 9000 ft, to MC312 between FL130 and FL160, to VEDVO at or above FL140, to SEGPO at or above FL170, to DAKIG, LEKEN, LARIT and NUDPI. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### **REMARK:**

- (1) For RNAV<sub>(GNSS)</sub> SID aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/ P-RNAV capability has been degraded before departure shall use the <u>Conventional Departure Procedure</u>:

Depart on track 359°M and climb to 400 ft (120 m). Then turn right and continue climb to ZAO. Leave ZAO on R041°. Cross MCU 12.5 NM at or above 1200 m (3937 ft) and turn right to track 081°M to MC411. From MC411 continue in accordance with the procedures as per HK AIP or expect radar vectors by Hong Kong ATC to ALLEY, CONGA, GRUPA or NUDPI.

If ZAO is unserviceable, depart on track 359 M, at MCU DME 3.3 turn right on track 041 M. Cross MCU 13.1 NM at or above 1200 m (3937 ft) and turn right to track 081°M to MC411. From MC411 continue in accordance with the procedures as per HK AIP or expect radar vectors by Hong Kong ATC to ALLEY, CONGA, GRUPA or NUDPI.

- (3) Aircraft are NOT TO OVERSHOOT ZAO DVOR R231° which defines the northern limit for flights taking off RWY 34 due to NOISE ABATEMENT for Zhuhai City.
- (4) Procedure Design Gradient based only on airspace restriction.
- (5) Aircraft unable to comply with the minimum climb gradient must inform MACAO ground control at first contact to allow special coordination.
- (6) Maximum departure turning speed: 205 kt IAS until directing to LATOP.
- (7) Aircraft shall fly at 250 kt or less below FL 110 transiting Hong Kong Airspace
- (8) In the event of loss of communication, aircraft shall comply with the last acknowledged clearance up to the next reporting point in the SID, then climb to the flight planned cruising level and follow the flight planned route to join the appropriate airway.
- (9) Owing to the proximity of the Hong Kong International Airport, any deviation from the standard SID track could result in direct conflict with Hong Kong traffic. Pilots departing on RWY 34 are reminded the need to follow the standard SID track until LUKBU unless deviation is approved by ATC in advance.

# GUANG ZHOU FIR - HONG KONG FIR RNAV(GNSS) SID MACAO RWY 34 (ALLEY 4 U, CONGA 5 U, GRUPA 5 U, NUDPI 1 U) CAT A, B, C, D

AIP MACAO

# GUANG ZHOU FIR – HONG KONG FIR RNAV $_{(GNSS)}$ SID MACAO RWY 34

AD2-VMMC-62 D 28 NOV 2024

(ALLEY 4 U, CONGA 5 U, GRUPA 5 U, NUDPI 1 U) CAT A, B, C, D

#### ALLEY 4 U (minimum climb gradient of 5.4% required until leaving 5500 ft)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, turn right to MC420 at or above 4000 ft (1219m), to MC411 at or above 5500 ft (1676m), to LUKBU at or above 6000 ft. Further climb when instructed by ATC. To MC314 at or above 9000 ft, to MC315 at or above FL130, to SUDVA at or above FL170, to SOSLU, PECAN and ALLEY. Continue on Terminal Transition Routes published on Hong Kong AIP.

#### **CONGA 5 U** (minimum climb gradient of 5.4% required until leaving 5500 ft)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, turn right to MC420 at or above 4000 ft (1219m), to MC411 at or above 5500 ft (1676m), to LUKBU at or above 6000 ft. Further climb when instructed by ATC. To MC314 at or above 9000 ft, to MC315 at or above FL130, to SUDVA at or above FL170, to LUBMO, DALOL, DUMEP, MEBKI and CONGA. Continue on Terminal Transition Routes published on Hong Kong AIP.

#### **GRUPA 5** U (minimum climb gradient of 5.4% required until leaving 5500 ft)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, turn right to MC420 at or above 4000 ft (1219m), to MC411 at or above 5500 ft (1676m), to LUKBU at or above 6000 ft. Further climb when instructed by ATC. To MC314 at or above 9000 ft, to MC315 at or above FL130, to SUDVA at or above FL170, to LUBMO, DALOL, XEMEK, SKATE, and GRUPA. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### NUDPI 1 U (minimum climb gradient of 5.4% required until leaving 5500 ft)

Climb on track 359°M, at 400 ft (120 m) turn right. Direct to LATOP, turn right to MC420 at or above 4000 ft (1219m), to MC411 at or above 5500 ft (1676m), to LUKBU at or above 6000 ft. Further climb when instructed by ATC. To MC314 at or above 9000 ft, to MC315 at or above FL130, to SUDVA at or above FL170, to LUBMO, LEKEN, LARIT and NUDPI. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### **REMARK:**

- (1) For RNAV<sub>(GNSS)</sub> SID aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/ P-RNAV capability has been degraded before departure shall use the <u>Conventional Departure Procedure</u>:

Depart on track 359°M and climb to 400 ft (120 m). Then turn right and continue climb to ZAO. Leave ZAO on R041°. Cross MCU 12.5 NM at or above 1200 m (3937 ft) and turn right to track 081°M to MC411. From MC411 continue in accordance with the procedures as per HK AIP or expect radar vectors by Hong Kong ATC to ALLEY, CONGA, GRUPA or NUDPI.

If ZAO is unserviceable, depart on track 359 M, at MCU DME 3.3 turn right on track 041 M. Cross MCU 13.1 NM at or above 1200 m (3937 ft) and turn right to track 081°M to MC411. From MC411 continue in accordance with the procedures as per HK AIP or expect radar vectors by Hong Kong ATC to ALLEY, CONGA, GRUPA or NUDPI.

- (3) Aircraft are NOT TO OVERSHOOT ZAO DVOR R231° which defines the northern limit for flights taking off RWY 34 due to NOISE ABATEMENT for Zhuhai City.
- (4) Procedure Design Gradient based only on airspace restriction.
- (5) Aircraft unable to comply with the minimum climb gradient must inform MACAO ground control at first contact to allow special coordination.
- (6) Maximum departure turning speed: 205 kt IAS until directing to LATOP.
- (7) Aircraft shall fly at 250 kt or less below FL 110 transiting Hong Kong Airspace
- (8) In the event of loss of communication, aircraft shall comply with the last acknowledged clearance up to the next reporting point in the SID, then climb to the flight planned cruising level and follow the flight planned route to join the appropriate airway.
- (9) Owing to the proximity of the Hong Kong International Airport, any deviation from the standard SID track could result in direct conflict with Hong Kong traffic. Pilots departing on RWY 34 are reminded the need to follow the standard SID track until LUKBU unless deviation is approved by ATC in advance.

# GUANG ZHOU FIR - HONG KONG FIR SID MACAO RWY 16 (BIGRO 1 F, MIPAG 2 F, NLG 1 F, IDUMA 1 F) CAT A, B, C, D

AIP MACAO

# GUANG ZHOU FIR – HONG KONG FIR SID MACAO RWY 16 (BIGRO 1 F, MIPAG 2 F, NLG 1 F, IDUMA 1 F) CAT A, B, C, D

AD2-VMMC-63 A 07 AUG 2025

#### BIGRO 1 F (minimum climb gradient of 3.8% required until leaving 1500 m)

Climb straight ahead to cross MCU DME 8.5 at 2000 ft (610 m) or above, then turn right on track 283°M, continue climbing and pass Sanzao beacon (U 272 kHz) at 1500 m. Climb on track 282°M and establish on ZUH R250° towards BIGRO, pass BOKAT at 3600 m.

If MCU is unserviceable, climb straight ahead to cross ZAO DME 14.8 NM at 2000 ft (610 m) or above then turn right on track 283 °M. Then join original procedure.

#### MIPAG 2 F (minimum climb gradient of 3.8% required until leaving 2400 m)

Climb straight ahead to cross MCU DME 8.5 at 2000 ft (610 m) or above, then turn right to MCU via MCU R197° and cross MCU at 1800 m. Leave MCU on  $R020^\circ$  and continue climbing to 2400 m, at LATOP turn right to establish on ZAO R042°. Continue climbing on ZAO R042° to 4500 m and maintain. At ZAO DME 36.3NM (GUBLO) turn left to establish on CEN R131° to MIPAG at 4500m.

If MCU is unserviceable, climb straight ahead to cross ZAO DME 14.8 NM at 2000 ft (610 m) or above then turn right to ZAO via ZAO R195°M and cross ZAO DME 6.7 NM at 1800 m, leave ZAO on R041°M and cross 2400 m by LATOP. Then join original procedure.

#### NLG 1 F (minimum climb gradient of 3.8% required until reaching 2400 m)

Climb straight ahead to cross MCU DME 8.5 at 2000 ft (610 m) or above, then turn right to MCU via MCU R197° and cross MCU at 1800 m. Leave MCU on R020° and reach 2400 m by LATOP. At LATOP turn left to establish NLG R167° and descend to reach 1500m by NLG.

If MCU is unserviceable, climb straight ahead to cross ZAO DME 14.8 NM at 2000 ft (610 m) or above then turn right to ZAO via ZAO R195°M and cross ZAO DME 6.7 NM at 1800 m, leave ZAO on R041°M and cross 2400 m by LATOP. Then join original procedure.

#### IDUMA 1 F (minimum climb gradient of 3.8% required until leaving 2400 m)

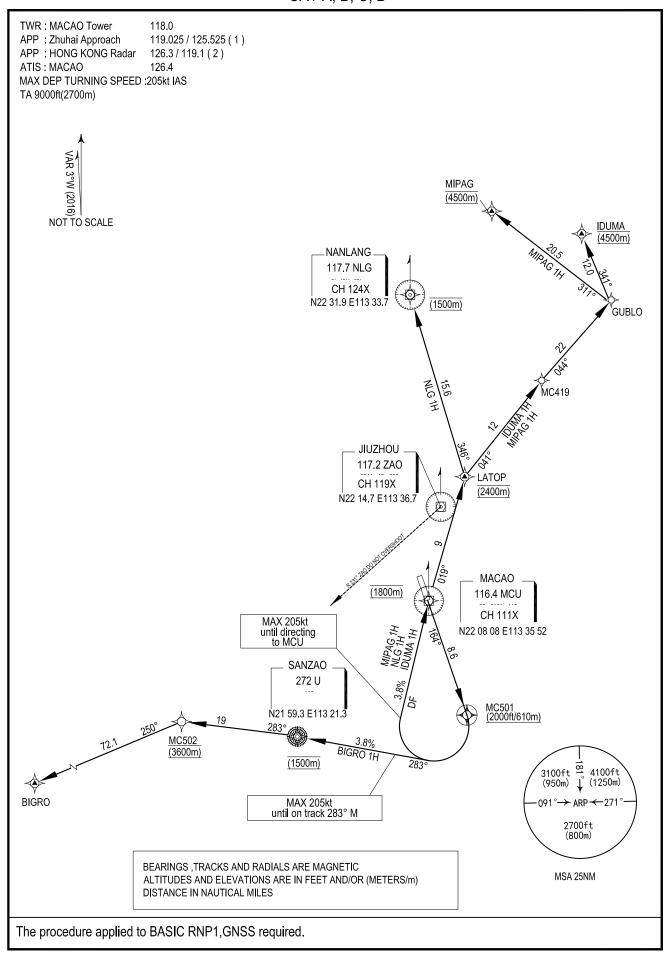

Climb straight ahead to cross MCU DME 8.5 at 2000 ft (610 m) or above, then turn right to MCU via MCU R197° and cross MCU at 1800 m. Leave MCU on R020° and continue climbing to 2400 m, at LATOP turn right to establish on ZAO R042°. Continue climbing on ZAO R042° to 4500 m and maintain. At ZAO DME 36.3NM (GUBLO) turn left on track 341°M to IDUMA at 4500m.

If MCU is unserviceable, climb straight ahead to cross ZAO DME 14.8 NM at 2000 ft (610 m) or above then turn right to ZAO via ZAO R195°M and cross ZAO DME 6.7 NM at 1800 m, leave ZAO on R041°M and cross 2400 m by LATOP. Then join original procedure.

#### **REMARK:**

- (1) Aircraft unable to comply with the minimum climb gradient must inform MACAO ground control at first contact to allow special coordination.
- (2) Maximum departure turning speed: 205 kt IAS.

# GUANG ZHOU FIR - HONG KONG FIR RNAV(GNSS) SID MACAO RWY 16 (BIGRO 1 H, MIPAG 1 H, NLG 1 H, IDUMA 1 H) CAT A, B, C, D

AIP MACAO

# GUANG ZHOU FIR – HONG KONG FIR RNAV $_{\rm (GNSS)}$ SID MACAO RWY 16 (BIGRO 1 H, MIPAG 1 H, NLG 1 H, IDUMA 1 H)

AD2-VMMC-64 B 07 AUG 2025

CAT A, B, C, D

#### BIGRO 1 H (minimum climb gradient of 3.8% required until leaving 1500 m)

Depart and Climb to fly-over MC501 on course 164°M at 2000 ft (610 m) or above, then turn right to Sanzao beacon (U 272 kHz) at 1500 m on course 283°M. To MC502 at 3600 m and to BIGRO.

#### MIPAG 1 H (minimum climb gradient of 3.8% required until leaving 2400 m)

Depart and Climb to fly-over MC501 on course 164°M at 2000 ft (610 m) or above, then turn right direct to MCU at 1800 m. to LATOP at 2400m, to MC419, GUBLO, MIPAG at 4500 m.

#### NLG 1 H (minimum climb gradient of 3.8% required until reaching 2400 m)

Depart and Climb to fly-over MC501 on course 164°M at 2000 ft (610 m) or above, then turn right direct to MCU at 1800 m. to LATOP at 2400m, and to NLG at 1500m.

#### IDUMA 1 H (minimum climb gradient of 3.8% required until leaving 2400 m)

Depart and Climb to fly-over MC501 on course 164°M at 2000 ft (610 m) or above, then turn right direct to MCU at 1800 m. to LATOP at 2400m, to MC419, GUBLO, IDUMA at 4500 m.

#### **REMARK:**

- (1) For RNAV<sub>(GNSS)</sub> SID aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/ P-RNAV capability has been degraded before departure shall use the Conventional Departure Procedure: BIGRO 1 F, NLG 1 F, IDUMA 1 F, MIPAG 2 F.
- (3) Aircraft unable to comply with the minimum climb gradient must inform MACAO ground control at first contact to allow special coordinations.
- (4) Maximum departure turning speed: 205 kt IAS.

AIP MACAO

# GUANG ZHOU FIR – HONG KONG FIR RNAV<sub>(GNSS)</sub> SID MACAO RWY 16 (ALLEY 2 P, CONGA 2 P, GRUPA 2 P, NUDPI 1 P)

AD2-VMMC-64 F 28 NOV 2024

CAT A, B, C, D

#### **ALLEY 2 P**

Climb on track 164°M to PAPA at or below 4000 ft. Expect further climb when instructed by ATC. To MULET and ALLEY. Continue on Terminal Transition route published in Hong Kong AIP.

#### **CONGA 2 P**

Climb on track 164°M to PAPA at or below 4000 ft. Expect further climb when instructed by ATC. To MULET, SKATE and CONGA. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### GRUPA 2 P

Climb on track 164°M to PAPA at or below 4000 ft. Expect further climb when instructed by ATC. To MULET, SKATE and GRUPA. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### NUDPI 1 P

Climb on track 164°M to PAPA at or below 4000 ft. Expect further climb when instructed by ATC. To MULET, SKATE and NUDPI. Continue on Terminal Transition Routes published in Hong Kong AIP.

#### REMARK:

- (1) For  $RNAV_{(GNSS)}$  SID aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/ P-RNAV capability has been degraded before departure shall use the <u>Conventional Departure Procedure</u>:

Proceed on MCU R164° to PAPA at or below 4000 ft. Further climb when instructed by ATC. From PAPA continue in accordance with the procedures as per HK AIP or expect radar vectors to **ALLEY, CONGA, GRUPA** or **NUDPI.** 

If MCU is unserviceable, Climb straight ahead at or below 4000 ft, track direct to MULET and continue in accordance with the procedures as per HK AIP or expect radar vectors to ALLEY, CONGA, GRUPA or NUDPI.

- (3) Aircraft are NOT TO OVERSHOOT JIUZHOU DVOR (ZAO 117.2 MHz) R231° which defines the northern limit for flights taking off RWY 34 due to NOISE ABATEMENT for Zhuhai City.
- (4) Aircraft unable to comply with the minimum climb gradient must inform MACAO ground control at first contact to allow special coordination.
- (5) Aircraft shall fly at 250 kt or less below FL 110 transiting Hong Kong Airspace
- (6) In the event of loss of communication, aircraft shall comply with the last acknowledged clearance up to the next reporting point in the SID, then climb to the flight planned cruising level and follow the flight planned route to join the appropriate airway.

# GUANG ZHOU FIR - HONG KONG FIR STAR MACAO RWY 34 (BIGRO 6 A, CON 6 A, NLG 5 A, POU 6 A) CAT A, B, C, D

### GUANG ZHOU FIR – HONG KONG FIR STAR MACAO RWY 34 (BIGRO 6 A, NLG 5 A, CON 6 A, POU 6 A) CAT A, B, C, D

AD2-VMMC-65 A 23 FEB 2023

#### **BIGRO 6 A**

Proceed from BIGRO to UJ. Cross GURIN at 2700 m and cross UJ at 2700 m.

#### CON 6 A

Descend on CON 191°M and cross FUSU at 3600 m or above, cross SAREX at 3300 m. At SAREX turn left to establish on NLG R351° to cross NLG. Leave NLG at NLG R167° to cross LATOP at 2400 m, then proceed on MCU R020° to cross MCU at 2100 m.

If MCU is unserviceable, from original procedure, to NLG. Leave NLG at R174°M to ZAO, track on ZAO R184°M, cross ZAO DME 6.7 NM at 2100m.

#### NLG 5A

Leave NLG on NLG R167° to cross LATOP at 2400 m, then proceed on MCU R020° to cross MCU at 2100 m.

If MCU is unserviceable, leave NLG at R174°M to ZAO, track on ZAO R184°M, cross ZAO DME 6.7 NM at 2100m.

#### POU 6 A

Descend on POU R120° to cross SAREX at 3300 m. At SAREX turn right to establish on NLG R351° to cross NLG. Leave NLG at NLG R167° to cross LATOP at 2400 m, then proceed on MCU R020° to cross MCU at 2100 m.

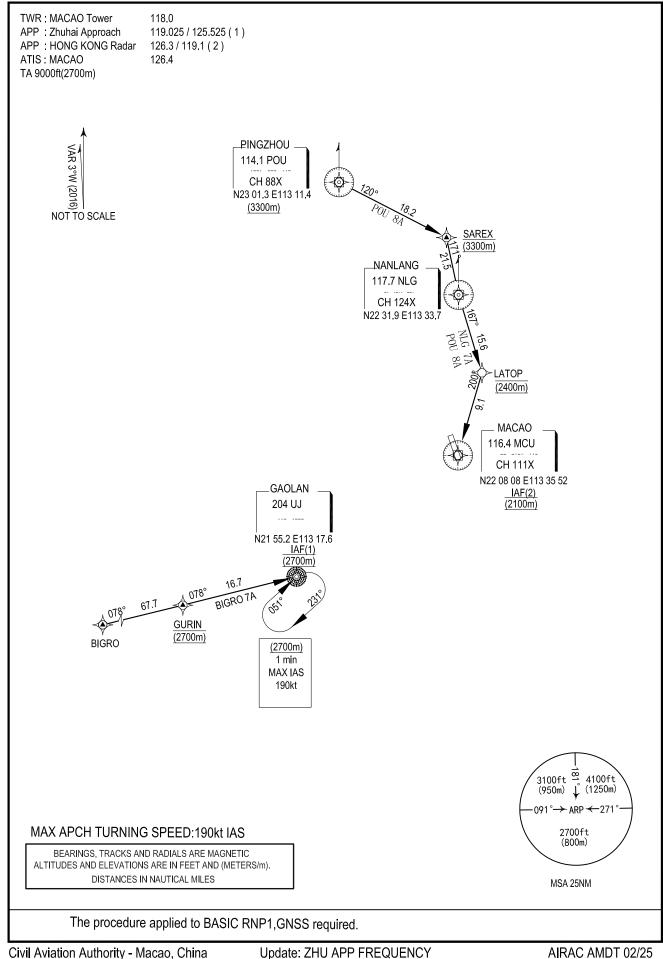

If MCU is unserviceable, from original procedure, to NLG. Leave NLG at R174°M to ZAO, track on ZAO R184°M, cross ZAO DME 6.7 NM at 2100m.

#### **REMARK:**

- (1) Maximum approach turning speed: 190 kt IAS
- (2) Standard Arrival Routes (STARS) to MIA Transiting Hong Kong Airspace Speed control
  - (a) Speed control shall be in force unless other wise advised.
  - (b) Aircraft on STAR clearance shall fly at not more than 250 kt IAS whilst they are below FL 110. Loss of communication

In the event of loss of communication, aircraft shall comply with the specified STAR procedure, then join the ILS approach to Macao RWY 34.

# GUANG ZHOU FIR - HONG KONG FIR RNAV(GNSS) STAR MACAO RWY 34 (BIGRO 7 A, NLG 7 A, POU 8 A) CAT A, B, C, D

## GUANG ZHOU FIR – HONG KONG FIR RNAV<sub>(GNSS)</sub> STAR MACAO RWY 34 (BIGRO 7 A, NLG 7 A, POU 8 A) CAT A, B, C, D

#### **BIGRO 7 A**

From BIGRO to GURIN at 2700 m, to UJ at 2700 m.

#### NLG7A

From NLG to LATOP at 2400 m, to MCU at 2100 m.

#### POU 8 A

From POU to SAREX at 3300 m, to NLG, then to LATOP at 2400 m, to MCU at 2100 m.

#### **REMARK:**

- (1) For RNAV<sub>(GNSS)</sub> STAR aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/P-RNAV capability has been degraded shall use the Conventional Procedure: BIGRO 6 A, NLG 5 A, POU 6 A.
- (3) Maximum approach turning speed: 190 kt IAS
- (4) Loss of communication

In the event of loss of communication, aircraft shall comply with the specified STAR procedure, then join the Macao RWY 34approach.

# GUANG ZHOU FIR - HONG KONG FIR RNAV(GNSS) STAR MACAO RWY 34 (CHALI 4 A, SMT 4 A) CAT A, B, C, D

#### GUANG ZHOU FIR – HONG KONG FIR RNAV<sub>(GNSS)</sub> STAR MACAO RWY 34 (CHALI 4 A, SMT 4 A) CAT A, B, C, D

#### CHALI 4 A

Leave CHALI at FL 110, Turn left to RUNLI at 9000 ft, to MC611 at or above 6000 ft descending to 3000ft. **DO NOT DESCEND WITHOUT ATC CLEARANCE.** 

#### Note:

Conventional procedure decommissioned. Aircraft that do not have approval or whose RNP1/ P-RNAV capability has been degraded shall report to HK ATC and expect radar vector from HK ATC.

#### SMT 4 A

Leave SMT to MC601, turn left to HAZEL at FL 110. DO NOT DESCEND WITHOUT ATC CLEARANCE.

#### Conventional Procedure

Leave SMT on R258°. At SMT DME 2.1 turn left track direct to HAZEL. Cross HAZEL at FL 110.

#### **REMARK:**

- (1) For RNAV<sub>(GNSS)</sub> STAR aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/P-RNAV capability has been degraded shall use the Conventional Procedure.
- (3) Maximum approach turning speed: 190 kt IAS
- (4) Standard Arrival Routes (STARS) to MIA Transiting Hong Kong Airspace

#### Speed control

Speed control shall be in force unless otherwise advised. Aircraft on STAR clearance shall fly at not more than 250 kt IAS whilst they are below FL 110.

#### Loss of communication

In the event of loss of communication, aircraft shall comply with the specified STAR procedure, then join the Macao RWY 34 approach.

#### **Holding**

The holding patterns for CHALI STAR are established at CHALI, PAPA and ATIKO. The holding patterns for SMT STAR are established at BUMDI, PAPA and ATIKO. In the event of holding, each flight will be instructed individually. In order to provide traffic management flexibility, traffic may be instructed to hold at other terminal holding (see HK AIP) as directed by ATC.

# GUANG ZHOU FIR - HONG KONG FIR STAR MACAO RWY 16 (BIGRO 9 A, CON 9 A, POU 9 A) CAT A, B, C, D

AIP MACAO

## GUANG ZHOU FIR – HONG KONG FIR STAR MACAO RWY 16 (BIGRO 9 A, CON 9 A, POU 9 A) CAT A, B, C, D

AD2-VMMC-68 27 JAN 2022

#### BIGRO 9 A

Proceed from BIGRO to UJ and cross GURIN at 2700 m. Leave UJ at 2700 m and turn left to establish on ZUH R211 $^{\circ}$  to cross ZUH at 1800 m.

#### CON 9 A

Descend on CON  $191^{\circ}M$  and cross FUSU at 3600 m or above, cross SAREX at 3300 m. At SAREX turn left to establish on NLG R351° to cross NLG at 2100 m.

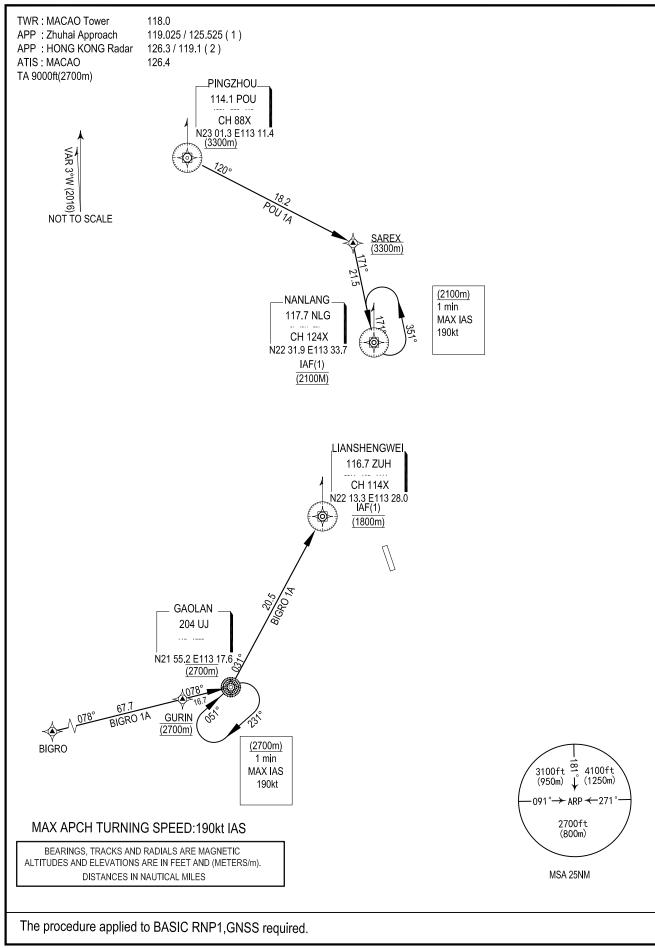

#### POU 9 A

Descend on POU R120 $^{\circ}$  to cross SAREX at 3300 m. At SAREX turn right to establish on NLG R351 $^{\circ}$  to cross NLG at 2100 m.

#### **REMARK:**

(1) Maximum approach turning speed: 190 kt IAS

# GUANG ZHOU FIR - HONG KONG FIR RNAV(GNSS) STAR MACAO RWY 16 (BIGRO 1 A, POU 1 A) CAT A, B, C, D

# GUANG ZHOU FIR – HONG KONG FIR AD2-VMMC-68 B STAR<sub>(GNSS)</sub> MACAO RWY 16 27 JAN 2022

(BIGRO 1 A, POU 1 A) CAT A, B, C, D

#### **BIGRO 1 A**

From BIGRO to GURIN at 2700 m., to UJ at 2700 m and to ZUH at 1800 m .

#### POU 1 A

From POU to SAREX 3300 m, to NLG at 2100 m.

#### **REMARK:**

- (1) For RNAV<sub>(GNSS)</sub> STAR aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/ P-RNAV capability has been degraded shall use the Conventional Procedure: BIGRO 9 A or POU 9 A.
- (3) Maximum approach turning speed: 190 kt IAS
- (4) Loss of communication:

In the event of loss of communication, aircraft shall comply with the specified STAR procedure, then join the Macao RWY 16 approach.

# GUANG ZHOU FIR - HONG KONG FIR RNAV(GNSS) STAR MACAO RWY 16 (CHALI 5 B, SMT 5 B) CAT A, B, C, D

AIP MACAO

# GUANG ZHOU FIR – HONG KONG FIR STAR<sub>(GNSS)</sub> MACAO RWY 16 (CHALI 5 B, SMT 5 B) CAT A, B, C, D

AD2-VMMC-68 D 28 JAN 2021

#### **CHALI 5 B**

Descend from CHALI at FL 110, Turn left to RUNLI at 9000 ft. Turn left to MC513, to INDUS at 2700m, to MC514 at 2100 m and to ZUH at 1800 m. **DO NOT DESCEND WITHOUT ATC CLEARANCE.** 

#### Note:

Conventional procedure decommissioned. Aircraft that do not have approval or whose RNP1/ P-RNAV capability has been degraded shall report to HK ATC and expect radar vector from HK ATC.

#### SMT 5 B

Leave SMT to MC601. Turn left to HAZEL at FL110 (3353m). Turn right to MC513, to INDUS at 2700 m, to MC514 at 2100 m and to ZUH at 1800 m. **DO NOT DESCEND WITHOUT ATC CLEARANCE.** 

#### **Conventional Procedure**

Leave SMT on R258 °. At SMT DME 2.1 turn left track direct to HAZEL. Cross HAZEL at FL 110. Turn right track direct to INDUS at 2700 m, cross ZUH DME 8.0 at 2100 and cross ZUH at 1800 m.

#### REMARK:

- (1) For RNAV<sub>(GNSS)</sub> STAR aircraft must be approved by State of Registry in accordance with ICAO RNP1 standard or equivalent. Carriage of certified GNSS receiver is mandatory.
- (2) Aircraft that do not have approval or whose RNP1/P-RNAV capability has been degraded shall use the Conventional Procedure:
- (3) Maximum approach turning speed: 190 kt IAS
- (4) Standard Arrival Routes (STARS) to MIA Transiting Hong Kong Airspace

#### Speed control

Speed control shall be in force unless otherwise advised. Aircraft on STAR clearance shall fly at not more than 250 kt IAS whilst they are below FL 110.

#### Loss of communication

In the event of loss of communication, aircraft shall comply with the specified STAR procedure, then join the Macao RWY 16 approach.

#### Holding

The holding patterns for CHALI STAR are established at CHALI, MC513 and ATIKO. The holding patterns for SMT STAR are established at BUMDI, MC513 and ATIKO. In the event of holding, each flight will be instructed individually. In order to provide traffic management flexibility, traffic may be instructed to hold at other terminal holding (see HK AIP) as directed by ATC.

#### AD 3.18 RADIO NAVIGATION AND LANDING AIDS

NIL.

#### AD 3.19 LOCAL TRAFFIC REGULATIONS

- **1.** Airline operators shall obtain prior approval from AACM for each specific type of helicopter to be operated.
- 2. Single-engine helicopters are not permitted to operate from the helipad and all operators are required to comply with Category 'A' vertical takeoff and landing profile requirements with zero drop-down.
- 3. Helicopters are limited to overall length of 18.7m with rotor diameter of 15.6m and a maximum all up weight not exceeding 9,000kg.
- 4. The MH shall be closed and all operations will be ceased when typhoon signal No.8 is hoisted or if the wind condition prevents safe flight operations as determined by the SHM or as prescribed in the Flight Operations Manual of the aircraft operator.
- 5. Tie-down parking outside operating hours will be permitted only when approved by the SHM, provided that during such tie-down period, the premises must be suitably manned. Tie-down of the aircraft is the responsibility of the airline operator or its agent.

AIP MACAO AD 3 - 9 04 JAN 2018

#### AD 3.20 NOISE ABATEMENT PROCEDURES

#### To be developed

#### AD 3.21 FLIGHT PROCEDURES

- 1. Traffic circuit
- 1.1. Depending on the wind direction, the helicopter can make a final approach to the pad on tracks 211 or 031°. Departures will be on tracks 031 or 211 or 121° (southern pad only).
- **2.** Landing on 21L/R Helipad
- 2.1. The helicopter shall descend on track 211° and land on the helipad.
- 2.2. If it is unable to make a safe landing, the helicopter shall turn left and climb on track 171° to an altitude of 500 ft. It will then turn left to the downwind track 031° and repeat the approach procedure, following a (standard) left-hand traffic pattern.
- 2.3. Circuit is left-hand for 21L/R landings.
- 3. Landing on O3L/R Helipad
- 3.1. The helicopter shall descend on track 031° and land on the helipad.
- 3.2. If it is unable to make a safe landing, the helicopter shall turn right and climb on heading 061° to an altitude of 500 ft. It will then turn right to the downwind track 211° and repeat the approach procedure, following a (non-standard) right-hand traffic pattern.
- 3.3. Circuit is right-hand for 03L/R landings.

Note: Takeoff 121° heading or Landing 301° heading is permitted at the southern platform only.

If it is unable to make a safe landing on  $301^{\circ}$ , the helicopter shall turn left and climb to 500' and to a reciprocal heading of  $121^{\circ}$  until able to re-establish final approach with left turn to final on  $301^{\circ}$  approach heading.
